pavers@xeripave.com

Modular Wetlands, Oceanside, California has come up with another excellent use for pavers from Xeripave.

They take stormwater runoff, either street side or parking lot side, and run it through a system they have developed that “mimics nature”, the MWS Linear. The arrow in the drawing shows where the pavers are used to catch sediments and aid in cleaning of the stormwater runoff.

Modular Wetlands developed this system in response to the EPA’s assessment that stormwater contamination represents the Nation’s number-one water quality threat.

It was the flexibility and efficiency of Xeripave that helped Modular Wetlands select our pavers. Xeripave can be used in a number of solutions: pervious path, strip drains in large parking areas, fitted into storm grates, adapted into rain water collection systems and incorporated into green roofs.
